

New Hall C "Core" Spectrometers

Constraints imposed by the physics objectives:

- Maximum momentum of 11 GeV/c (CT)
- Minimum central angle of 5.5° (F_π)
- Maximum angle of 30° ($N \rightarrow N^*$)
- Moderately good resolution in momentum and angle ($N \rightarrow N^*$)
- Larger vertical than horizontal angular acceptance. (F_π , $N \rightarrow N^*$)

Characteristics needed to match the SHMS to the HMS:

- Moderate solid angle (2-3 msr in small angle mode).
- Full acceptance of a 15 cm cryotarget cell at $\Theta_{shms} = 30^\circ$
- Minimum opening angle of the SHMS-HMS pair to be $5.5^\circ + 10.5^\circ = 16^\circ$.

Miscellaneous considerations:

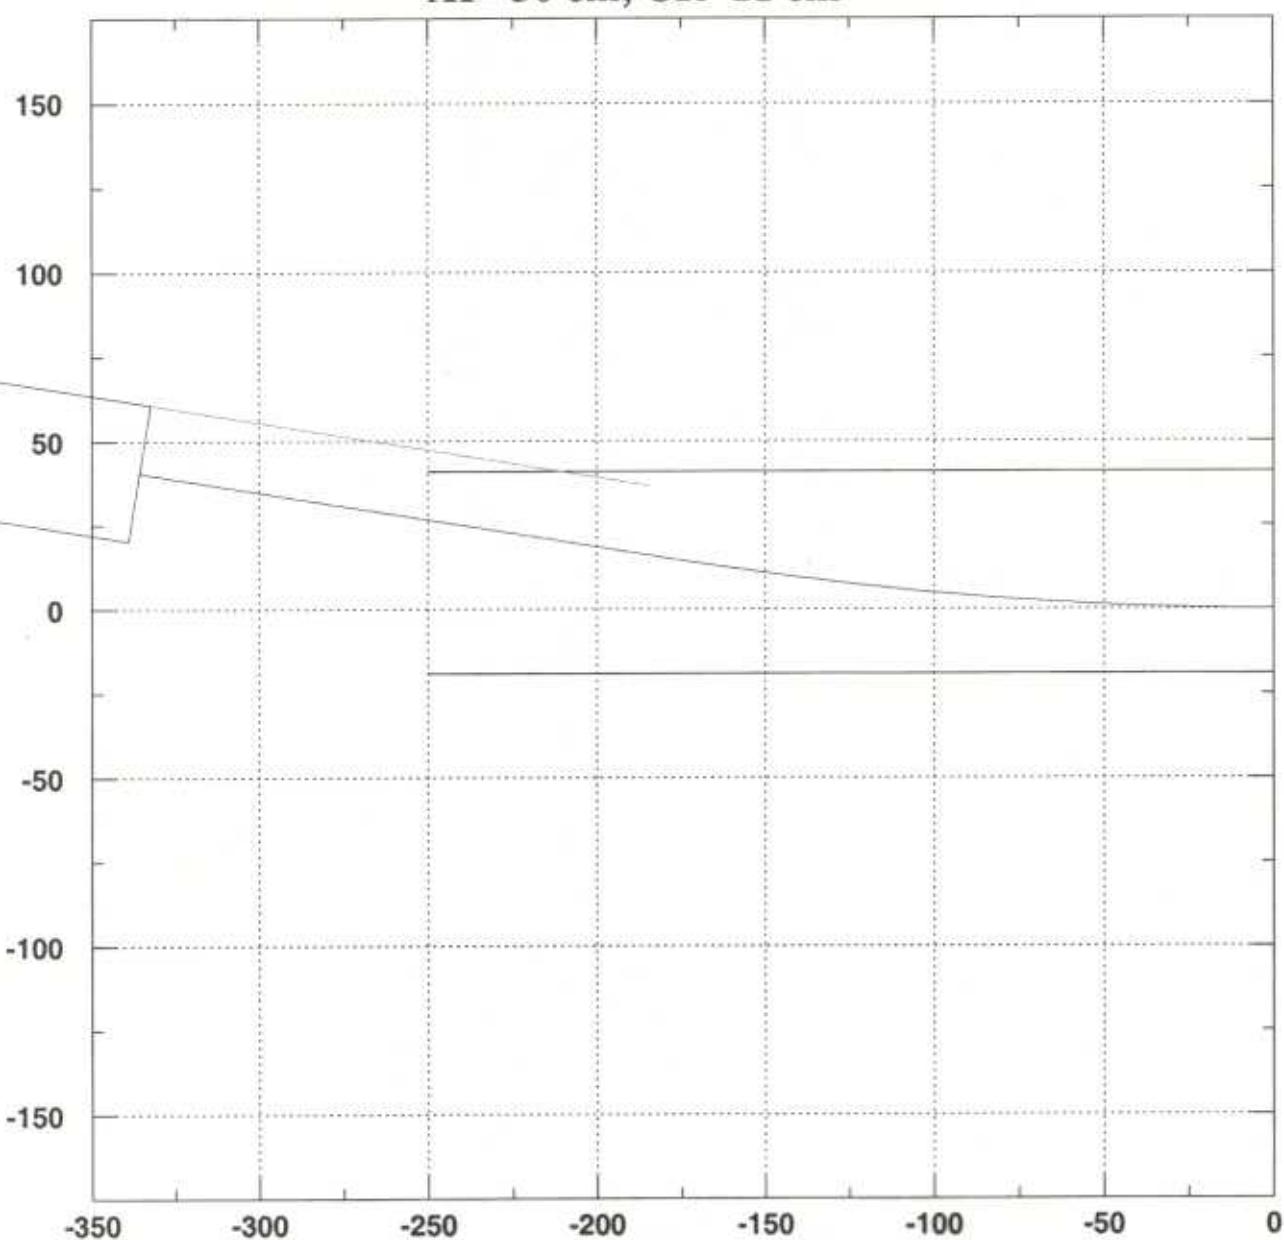

- Distance to the focal plane less than 19 meters.
- Bend angle of the dipole larger than 15° .
- Point to Point tune.
- Assume two first quads are HMS Q1-type.

Basic parameters of the SHMS

Max. Central Momentum	11 GeV/c
Min. scattering angle	5.5°
Momentum resolution	.15%-.2%
xptar,yptar resolution	1-2 mrad, 1-2 mrad
Ytar resolution	.2-.6 cm
Vertical acceptance	±42 mrad
Horizontal acceptance	±14 mrad
Solid angle	2 msr (small angle mode)
Momentum acceptance	20%
Opening angle with HMS	16°
Configuration	QQ(DQ)
Bend Angle	18.4°
Focusing mode	Double
Max. rigidity	400 kG-m
Dispersion	1.764 cm/%
D/M	1.20 cm/%
